

BUYBACK AND ITAD PROGRAM

Provide additional value-added services to your customers and increase stickiness with AOM Services' Buyback and IT Asset Disposition (ITAD) program. ITAD services are focused on increased data security and ensuring all data is handled responsibly and destroyed appropriately. The Buyback Program enables you to capture value from old hardware you are replacing and provide additional value back to your customers.

We've designed this program to help you:

- Receive funds for eligible hardware you no longer have a use for.
- Add more margin to your new equipment deals.
- Gain a competitive advantage when selling new equipment that is displacing old equipment.
- Optimize the two-to-three-year resale window on most hardware.
- Provide clients a value-add service for equipment that is taking up space or no longer needed.
- Have minimal involvement in the buyback and ITAD process.

The Buyback and ITAD program provides:

- Onsite technicians to collect, palletize, and ship hardware.
- Logistics services to pick up and transport pre-palletized equipment to a processing facility.
- Onsite technicians or offsite services to perform data erasure, degaussing, or physical destruction to devices needing data destruction.
- Guaranteed data security and compliance – DOD, HIPAA, SOX, GLBA, FACTA, and NIST Compliant
- Nationwide secure electronics collection, transport, destruction, data eradiation, and reporting.
- Global onsite data eradication services for all data bearing devices, which includes data liability and breach insurance and electronic waste recycling where needed.
- Global reach into over 140 countries.

Ready to get started?

Send your used equipment device inventory (vendor/make/model/quantity) and your contact information to sales@aompartner.com
